

# XINE

- James Courtier-Dutton:
  - Linux Multimedia (Videos, Music, VoIP, Multicast etc.)
  - Linux Kernel (ALSA)
  - Linux Software Defined Radio (SDR)
  - Reverse Engineering.

# xine : Activity

- Project aim:
  - No specific aims
  - xine is well designed and modular with plugins.
  - Users/developers add features as and when they need them.
  - xine supports a huge range of multimedia formats, with more being added all the time.

# xine : Challenges

- Software Patents
- Lack of developers
- The demuxer problem.

# xine : Dependencies

- Libraries in use:
  - Many different ones (more than 51).
  -
- Projects dependent upon:
  - ffmpeg (for codecs)
  - libdvdnav/libdvdread
  -

# xine : Next Steps

- Fix bugs, add new codecs, features.
- There are no specific goals, the project just evolves over time.
