That's Me

- Zaheer Merali

- Gstreamer and Flumotion

- To contribute to development of open formats with an added perspective from a live streaming background

Flumotion: Activity

- Project aim:
  - Flexible multi-format live video streaming
  - Handle from capture to the actual delivery
  - Work with open formats first and best
- Features:
  - Capture from one source and encode and stream in many formats.
  - Remote administration of the stream, start/stop recording etc.

Flumotion: Challenges

- Too difficult to understand for common users

- Web facing management UI

- How to handle presentations at same time as video

- Subtitles and other metadata (captions, extended audio descriptions etc.)

Flumotion: Next Steps

- Web UI for management of flumotion flow

- It would be nice to solve the presentation problem for free formats

- Spec and prototype chunked streaming of ogg and webm ala Apple HTTP Live Streaming
